 Sylhet, Bangladesh

Cross-Platform & Mobile Engineer with a strong foundation in Flutter, Dart, and native mobile development. Proven track record of architecting scalable applications using Clean Architecture and BLoC/Cubit state management. Experienced in building complex multi-platform apps, integrating native APIs (HealthKit, Health Connect), and maintaining robust offline-first sync pipelines. Developed and shipped production React Native and SwiftUI applications end-to-end, leveraging native iOS and Android expertise to bridge platform boundaries effortlessly.

SKILLS

- **Flutter & Dart:** Flutter 3.x, Dart 3 (sound null safety, pattern matching), GoRouter, platform channels (MethodChannel/EventChannel), Flutter DevTools, Flutter Flavors, freezed, json_serializable
- **Architecture & State Management:** Clean Architecture (presentation, domain, data layers), BLoC / Cubit, Riverpod 2, domain repository pattern, use cases, dependency injection (GetIt/Injectable), offline-first sync pipelines.
- **Native Integration & Cross-Platform:** Swift 6, SwiftUI, Swift Concurrency (actors, @MainActor), Apple HealthKit, Android Health Connect, Objective-C interop, React Native 0.85, Expo SDK 56, TypeScript.
- **Backend, Data & Caching:** RESTful APIs, Dio (interceptors, retry/backoff strategies), Cloud Firestore (composite indexes, security rules), Firebase Auth, Hive/drift (local persistence), MySQL.
- **Testing & Engineering Practices:** Automated testing (flutter_test, mocktail/mockito, golden tests, contract testing), CI/CD pipelines (Codemagic, GitHub Actions), TestFlight & App Store distribution, Git version control, Agile/Scrum.

RELEVANT EXPERIENCE

Mobile Application Developer

09/2025 – Present | Boston, MA

Lab3 (Healthcare Payments & SaaS), Remote 

- **Architected core Flutter modules:** Delivered three core, high-complexity feature tabs (Prescriptions, Products, Orders) for the GEN Health Flutter telehealth app, matching existing web portal business logic under strict release deadlines.
- **Cross-platform product ownership:** Shipped GenFit to the App Store using React Native (Expo SDK 56) across 25 screens with 978 automated tests, unifying Apple HealthKit and Android Health Connect behind one validated contract (10 read metrics, 7 write types).
- **Low-level package debugging:** Patched two critical upstream health integration package defects prior to launch, resolving unbounded historical date queries and false-positive write authorizations.
- **Testable architecture & CI/CD:** Decoupled application logic behind domain repository interfaces using dependency injection (mock, local, live), enabling complete test suites to execute headlessly in CI/CD pipelines without physical devices or active backends.
- **Offline-first reliability:** Engineered offline-safe clinical logging using local-first commits and a background sync queue, implementing strict UID-mismatch validation to prevent patient data overlap.
- **Native iOS & payment integration:** Built HIPAA-compliant native clinical platforms (BillPay-POS on TestFlight and HarpMD on Apple Custom Apps) under Swift 6 strict concurrency, bridging an Objective-C payment SDK and Bluetooth card reader into Swift async/await.

Flutter Developer Intern

02/2025 – 08/2025 | Chittagong

Prisma.co (Remote)

- Developed core feature screens and integrated core features for a consumer lifestyle Flutter application, following existing design specs and BLoC/Cubit state management patterns.
- Collaborated on cross-functional features with backend teams to consume API endpoints, optimize UI rendering speed, and fix state sync bugs prior to feature releases.

TECHNICAL PROJECTS

Tuition Finder

01/2026 – 03/2026

Dart, Flutter 3.x, Firebase (Auth/Firestore), BLoC/Cubit, freezed

- **Implemented Clean Architecture for real-time tutoring platform:** Enforced strict layer separation (Domain use-cases, Data sources/repositories, BLoC/Cubit presentation controllers) to keep business logic 100% testable and independent of the UI.
- **Designed role scoped data abstraction & CRUD workflows:** Built full CRUD pipelines for tuition posts, tutor applications, and profile management, backed by Firebase Auth mapping that strictly scopes Firestore access by user role.
- **Optimised multi-criteria query & sync pipeline:** Built indexed Firestore composite queries for low-latency filtering by subject, location, and rate, plugged into domain repository streams for optimistic UI updates during live data sync.

EDUCATION

BSc Engineering in CSE

01/2020 – 09/2025 | Khulna, Bangladesh

Khulna University Of Engineering & Technology
