Profile Summary

iOS Developer with 1+ year of production experience building a healthcare fintech POS system (50,000+ monthly transactions) as sole iOS developer at LAB3. Proficient in Swift 6, SwiftUI, MVVM, Firebase, and payment SDK integration (MXMerchant, AnyPay). Experienced in full-cycle iOS delivery including architecture, Firestore real-time sync, Bluetooth terminal integration, and TestFlight distribution. Known for clear cross-functional communication and strong attention to detail in high-stakes production environments.

Relevant Experience

Junior iOS Developer

09/2025 – Present | Boston, MA

Lab3 (Remote) 

- Sole iOS developer for BillPay-POS, a healthcare payment system processing 50,000+ monthly transactions across multiple clinics on a multi-tenant SaaS platform.
- Architected and shipped scalable features using Swift 6, SwiftUI, and MVVM with clean REST API integration and robust JSON handling.
- Integrated MXMerchant terminal and BBPOS Bluetooth card reader, enabling smooth card-present payments at the point of care.
- Collaborated daily with cross-functional teams (backend, QA, product) across the US in an Agile/Scrum environment, proactively communicating blockers and shipping reliable features on schedule.
- Cut debugging time by 75% by introducing structured OSLog-based logging and systematic Instruments profiling across the codebase.
- Owned the full TestFlight distribution pipeline and led internal QA cycles before every release to ensure production stability.

iOS Developer Intern

06/2025 – 08/2025 | Dhaka

SahiTech Ltd. (Remote) 

- Built WidgetKit extensions and Apple Watch complications that delivered glanceable, up-to-date information on Apple's most personal screens.
- Developed modular, reusable SwiftUI components and clean REST API data handlers that plugged directly into the team's existing architecture.

Projects

Foodier! & Foodier Restaurant

2023

SwiftUI · Cloud Firestore · Firebase Auth · Firebase Storage · MapKit · MVVM

- Architected two companion iOS apps (customer + restaurant) sharing a single Firebase backend, enabling real-time order sync with no manual refresh.
- Built a reusable SwiftUI component system across 10+ screens, reducing UI duplication and keeping both apps visually consistent.
- Implemented a full order lifecycle (New → Processing → On the Way → Delivered) synced live between both apps via Firestore real-time listeners.
- Integrated MapKit for live order tracking, letting customers follow delivery on a map in real time.
- Managed Firebase Auth for dual user roles (customers & restaurant owners) with secure sign-in, sign-up, and account deletion.

CfL (Care for Love)

2023

Java (Android) · Firebase Auth · Firebase Realtime Database · JUnit

- Built a cardiac patient health-monitoring Android app with full CRUD operations — enabling doctors and caregivers to add, view, search, edit, and delete patient vitals synced live via Firebase Realtime Database.
- Secured the app with Firebase Auth covering registration, login, sign-out, and email verification, ensuring only authorized users access sensitive patient data.
- Delivered a production-ready submission with 5 JUnit unit tests (DetailsClassTest) covering add, delete, and exception edge cases, alongside a full UML class diagram documenting the data architecture.

Skills

Backend & Data: Firebase Auth, Cloud Firestore, Firebase Storage, REST APIs, JSON, Core Data, Offline Caching

Languages & Frameworks: Swift 6, SwiftUI, UIKit, Combine, WidgetKit, MapKit, Java

Tools & Platforms: Xcode, Git, Instruments, OSLog, TestFlight, Postman, Jira, Agile/Scrum

Specializations: MVVM, Swift Concurrency & Actors, Multi-Tenant SaaS, Bluetooth (BBPOS), MXMerchant SDK, AnyPay SDK

Education

BSc Engineering in CSE

01/2020 – 09/2025 | Khulna, Bangladesh

Khulna University Of Engineering & Technology
