

Biduyt Das

Mobile Application Developer · iOS, watchOS, Android

 pkdasbiduyt@gmail.com  BiduytDas  PKD118  Biduyt Das portfolio  +8801633004104  Sylhet, Bangladesh

Native-first mobile developer who has owned three products end to end: a multi-tenant SwiftUI iPad point-of-sale for healthcare clinics, taken to TestFlight release; a clinical iPad app distributed to organisations through Apple Custom Apps; and a React Native health app shipped to the public App Store. Earlier, 53 WidgetKit widgets and 7 watch faces on a production watchOS app. Swift and SwiftUI are where I work by default, React Native when one codebase genuinely has to serve both stores.

SKILLS

- **iOS & Apple platforms:** Swift 6, SwiftUI, Swift Concurrency (actors, Sendable, @MainActor, structured concurrency), Objective-C interop, MVVM, WidgetKit, watchOS complications, HealthKit, WeatherKit, Instruments, OSLog
- **Cross-Platform:** React Native 0.85, Expo SDK 54 and 56, TypeScript, EAS Build and OTA updates, TanStack Query, Zustand, Zod, Android Health Connect, Java (Android)
- **Payments & hardware:** AnyPay SDK, BBPOS Chipper 3X Bluetooth card reader, MXMerchant terminal API, card-present and manual payment flows
- **Backend & Data:** Firebase (Auth, Cloud Firestore, Storage, security rules, composite indexes, Crashlytics), Google Secret Manager, REST APIs, offline-first sync
- **Testing & Release:** Jest, React Native Testing Library, JUnit, contract and timezone regression testing, Playwright, TestFlight, App Store submission, code signing, GitHub Actions
- **Domain:** healthcare payments, PHI audit logging, multi-tenant SaaS, Agile/Scrum

RELEVANT EXPERIENCE

Mobile Application Developer

09/2025 – Present | Boston, MA

Lab3, Remote 

- Owned BillPay-POS, a multi-tenant SwiftUI iPad point-of-sale for healthcare clinics, from Figma through TestFlight release, then handed it to a partner company for the ad hoc production rollout.
- Integrated the AnyPay Objective-C framework and a BBPOS Chipper 3X Bluetooth card reader, bridging Obj-C callbacks into async/await with withCheckedThrowingContinuation, and built the MXMerchant terminal flow as a three-step sequence with a 120-second poll.
- Resolved Swift 6 strict concurrency across the codebase: actors for pure-async services, @MainActor for Obj-C callback wrappers and anything publishing UI state.
- Built HIPAA compliance into the payment path: six logged actions on every patient-data access, a 60-minute regulatory session timeout, and per-clinic credentials held in Google Secret Manager so one tenant cannot spend another's.
- Delivered HarpMD in parallel and out to client organisations through Apple Custom Apps distribution: Firebase auth with disabled-account checks, concurrent multi-business selection, MVVM under Swift 6 with zero compiler warnings.
- Shipped GenFit to the App Store: with Apple HealthKit and Android Health Connect behind a single validated contract of 10 read metrics and 7 write types.
- Handled release engineering across three Apple distribution channels: public App Store, Custom Apps for organisations, and ad hoc with TestFlight, including code signing, provisioning and a successful App Store resubmission after a capabilities rejection.

iOS Developer Intern

06/2025 – 08/2025 | Dhaka

SahiTech Ltd. (Remote) 

- Shipped 53 WidgetKit widgets across 11 bundles and 76 complication views, plus 7 full watch faces and 6 SwiftUI drawing components the team reused across other collections.
- Made layouts resolution-independent by expressing every dimension as a ratio of GeometryReader size, so one view renders correctly from 41mm to 49mm.
- Wired HealthKit, WeatherKit, battery and moon-phase data into accessoryCircular and accessoryRectangular complications on a TimelineProvider refresh budget.

PROJECTS

Foodier! & Foodier Restaurant

2023

SwiftUI · Cloud Firestore · Firebase Auth · MapKit · MVVM

- Two companion iOS apps over one Firebase backend.
- Modelled the order lifecycle as a five-state machine on a single status field that both apps observe and advance, with live MapKit delivery tracking.

KRISHIBANDHU

04/2026 – 06/2026

TypeScript · React Native · Expo SDK 54 · Firebase · NativeWind

- Bilingual Bangla/English marketplace, 21 screens across buyer, seller and admin roles, built solo.
- Order state machine enforced server-side in a Firestore ruleset. Demo build.

cFL (Care for Love), cardiac patient monitoring

2023

Java (Android) · Firebase Auth · Firebase Realtime Database · JUnit

- Full CRUD on patient vitals synced live for doctors and caregivers, with email-verified auth, 5 JUnit tests covering add, delete and exception paths, and a full UML class diagram.

EDUCATION

BSc Engineering in CSE

01/2020 – 09/2025 | Khulna, Bangladesh

Khulna University Of Engineering & Technology
