 Sylhet, Bangladesh

Mobile Application Developer at a healthcare SaaS company who ended up doing the product manager's job. For two products in 11 months, plus quality ownership on a third, the brief was often just a short readme or an existing product to reverse-engineer, and turning that into scope, a schedule, and a case stakeholders could act on fell to me. That included an AI fitness app taken from a 500-word brief to a public App Store launch in 8 weeks, a clinic web app rebuilt as a PCI- and HIPAA-compliant iPad and self-service kiosk, and the quality process for a live healthcare platform.

SKILLS

- **Requirements & Stakeholders:** Client discovery · Stakeholder communication · US ↔ BD timezone collaboration
- **Scoping & Delivery:** Backlog ownership · Agile · Scrum · Trello · Risk-first sequencing
- **Quality as a Process:** Manual + automated QA · CI/CD (GitHub Actions) · Playwright · Slack-synced PR results · Sentry monitoring
- **Launch & Compliance:** App Store review (Public App Store, TestFlight) · Rejection recovery · Review-cycle foresight · PCI/HIPAA compliance specification
- **AI Product Sense:** LLM features in production · MCP servers · AI workflow guardrails
- **Technical Fluency:** Swift · SwiftUI · React Native · TypeScript · Firebase · Playwright

RELEVANT EXPERIENCE

Mobile Application Developer

09/2025 – 07/2026 | Boston, MA

Lab3 (Healthcare Payments & SaaS), Remote 

- Worked from minimal input most of the time, often just a short readme or an existing web app to study, and turned it into scoped, estimated work.
- Took GenFit, an AI health and fitness app, from a 500-word brief to a public App Store launch in 8 weeks. Joined the client calls from the first one, shaped the MVP out of those conversations, benchmarked competitor apps (MyFitnessPal, Hevy, Strong), scoped 51 delivered cards, shipped 4 AI-backed features, integrated Apple HealthKit and Android Health Connect, wrote the privacy policy, and held a quality bar of 978 unit and contract tests before submitting to the App Store, built and tailored specifically for a large US gym chain; the client reports 1,300+ of their members onboarded so far.
- Rebuilt BillPay-POS, Lab3's own product, from a clinic's existing web app into a PCI- and HIPAA-compliant iPad point-of-sale with a self-service patient kiosk mode, solo, no design handoff. Designed the kiosk's patient-facing security model, coordinated the AnyPay reader integration directly with AnywhereCommerce's engineering team, shipped 3 payment paths (terminal, Bluetooth reader, manual entry), designed an append-only audit log covering 6 tracked actions on patient data, and handed the finished product to a partner company for clinic rollout. Lab3 keeps a commission on every payment, which is how the product is known to still process \$50k+ a month.
- Carried QA for the Harp platform from manual testing through full automation. Grew the Playwright test suite from 220 to 298 tests, introduced data-testid standards to fix tests that reported green while the UI was actually broken, and built a GitHub Actions CI pipeline posting results to Slack on every PR plus scheduled regression sweeps. Surfaced and fixed 13 payment defects this way, most self-identified before being reported by anyone else.
- Managed releases across both Apple distribution channels (public App Store, TestFlight), including recovering a capabilities-related App Store rejection through rescoping.
- Delivered 160 tickets total across two shipped products and the Harp platform, sequencing work by risk so the highest-uncertainty items surfaced early.
- Collaborated daily in Agile/Scrum with backend, QA, and product teams across US and Bangladesh time zones, and was recognized as Lab3's Most Universal Employee at the annual company retreat for contributing across the BillPay-POS, Harp, and GenHealth teams in a single year.

iOS Developer Intern

02/2025 – 08/2025 | Dhaka

SahiTech Ltd.(Remote) 

- Owned three widget and watch-face collections end to end within an existing product line (53 widgets, 7 watch faces) on a fixed roadmap and release cadence.
- Built reusable SwiftUI components adopted by the rest of the team across future collections.
- Took part in sprint planning and code review on a fully remote, cross-timezone team.

EDUCATION

BSc Engineering in CSE

01/2020 – 09/2025 | Khulna, Bangladesh

Khulna University Of Engineering & Technology

LEADERSHIP & BUSINESS OPERATIONS

General Secretary, CSE Association

04/2023 – 04/2024 | KUET

- Coordinated operations and communication across 500+ students spanning technical, creative, and academic teams.
- Ran recruitment drives with industry partners including Huawei, BDCOM, and DSI.
