 Sylhet, Bangladesh

React Native developer working in health software. I built GenFit, an AI health platform, end to end and released it to the Apple App Store: 25 screens on Expo SDK 56 and React Native 0.85, backed by 978 automated tests, iOS and Android from one codebase. Apple HealthKit and Android Health Connect sit behind a single validated contract there. A second React Native app of 21 screens in TypeScript, and Telehealth tabs on a third. Underneath all of it, a year of native iOS in Swift 6 and SwiftUI on two HIPAA-regulated clinical apps, which is why the native module boundary is not a black box to me.

SKILLS

- **React Native & Expo:** React Native 0.85, Expo SDK 54 and 56, EAS Build and Update, OTA updates, Expo config plugins, React Navigation, Reanimated 4 and worklets, react-native-svg, NativeWind
- **JavaScript & TypeScript:** ES2022 (modules, async/await, destructuring, optional chaining), TypeScript, React 19, Node.js (build tooling, seed and migration scripts)
- **State & Data:** TanStack Query v5, Zustand, react-hook-form, Zod 4, AsyncStorage, offline-first sync
- **API & Databases:** RESTful API integration, JSON contracts, Cloud Firestore (document-oriented, security rules, composite indexes), Firebase Auth and Storage, MySQL
- **Native integration:** Apple HealthKit, Android Health Connect, native module debugging, Swift and Objective-C interop, Info.plist and Android manifest entitlements
- **Build Tooling:** Xcode, Android Studio, Gradle, EAS Build
- **Native iOS:** Swift 6, SwiftUI, Swift Concurrency (actors, Sendable, @MainActor), MVVM, WidgetKit, watchOS, Instruments
- **Testing & process:** Jest, React Native Testing Library, contract testing, Playwright, TestFlight, App Store submission, Git, Trello, Agile/Scrum

RELEVANT EXPERIENCE

Mobile Application Developer

09/2025 – 07/2026 | Boston, MA

Lab3 (Healthcare Payments & SaaS), Remote 

- Built GenFit alone, an AI health platform, and released it to the App Store: 25 screens on Expo SDK 56 and React Native 0.85, backed by 978 tests, iOS and Android from one codebase.
- Integrated Apple HealthKit and Android Health Connect behind one validated contract, 10 read metrics and 7 write types, and fixed two upstream defects that failed silently: date filters that spanned a user's entire health store, and writes that were never actually authorised.
- Delivered the Prescriptions, Products and Orders tabs for GEN Health, a React Native Telehealth app, mirroring an existing web patient portal.
- Put every external dependency behind an adapter with its own mock, real or live flag, and validated every network response against a Zod schema. The app and its whole test suite run with no backend and no device, which is how it got built before one existed.
- Made offline clinical logging safe: the local write is the commit, the cloud push runs detached behind a visible pending state, and drafts are rejected on UID mismatch so one patient's record cannot land in another's.
- Native iOS across the same period: owned BillPay-POS, a HIPAA-regulated SwiftUI iPad point-of-sale taken to TestFlight release, and HarpMD, a clinical iPad app distributed through Apple Custom Apps. Swift 6 strict concurrency, and an Objective-C card-reader SDK bridged into async/await.

iOS Developer Intern

02/2025 – 08/2025 | Dhaka

SahiTech Ltd.(Remote) 

- Shipped 53 WidgetKit widgets across 11 bundles and 76 complication views on a production watchOS app, with layouts made resolution-independent through GeometryReader ratios so one view renders correctly from 41mm to 49mm.

TECHNICAL PROJECTS

KRISHIBANDHU

04/2026 – 06/2026

TypeScript · React Native 0.81 · Expo SDK 54 · Firebase ·
NativeWind · Zustand · Zod

- Bilingual Bangla/English marketplace built solo: 21 screens across buyer, seller and admin roles behind one root state machine, with order transitions enforced server-side in a Firestore ruleset.
- Replaced a single-pass image compressor that hard-failed on iPhone originals with a six-step quality fallback, so a seller could always list. Demo build.

EDUCATION

BSc Engineering in CSE

01/2020 – 09/2025 | Khulna, Bangladesh

Khulna University Of Engineering & Technology
